About This Game

Onimod Land is real-time strategy game. The premise of the game centers around a conflict between inhabiting aboriginals and settlers from space as they both try to colonize a planet. The number of units is almost limitless, which makes for gi-normously impressive battles with lot of tanks, helicopters, catapults, etc. Each race has a unique set of skills (technologies or magic spells) with more than 30 upgrades. The AI of the units allows them to help each other during a battle, repair broken buildings, etc. Game networking supports up to 8 players. The game mechanics allow players to declare (or break) political alliances. There are 5 campaigns and 30 maps in the game. With the map editor built into the game, you can just keep adding more maps.

Graphics: 2D isometric

Screen Resolution: any

Technologies of Programming: C++ and Assembly

This project began in the late 90's, when games focused on game play with only 8-bit graphics. Games such as "Warcraft 2" and "Age of Empires 1" emerged as a sensation because of their clever game play. Beating this game with it's brutal efficiency and crafty knack for making shrewd decisions is quite a challenge. The AI is quite intelligent and even I, as the author, can't win with more than 3 computer opponents. The game AI plays without cheating. It doesn't fudge resources nor spy on the player.

I stress tested my server using a few of my friends. It's possible that efficiency issues may pop up with a larger number of players. Just be aware that I'm entirely aware of this potential problem and will be looking out for it. Any problems that do appear will be dealt with promptly.

Title: Onimod Land
Genre: Strategy

Love the work you are putting into those games keep the good work up <3. Actually if devs will add not that vulgar content mod, i will play all the games, since im living with my little brother in the room, i dont feel comfortable to play THAT vulgar game. The rest is ok.. \ud83c\udf1f\ud83c\udf1f\ud83c\udf1f\ud83c\udf1f\ud83c\udf1f. My mouse is clicking me now! I can't recommend this unless you want to exercise your fingers.

5/10 - Bonus points for nice design and sound.. i really love this game but it did not have an asia region or server so i lag a lot that is why i can only play the traaining mode so i call out to the developers to make an asia server for me please to enjoy the game. A game with bullet hell and fighting aspects mixed together. The gameplay is smooth and the graphics are nicely made. Only big issue is that online matches isn't exactly active since playerbase seems to be quite small. Unfortunately, battling against CPUs all the time can't keep me interested forever. Other then that problem, it's a fun game.

So you need to tweak some of this tiles in order to make them in working order. Tiles look good but you guys can do much better. At least your game will look a bit different. I'm enjoying the game and playing with gamepad which controls well. Though this could be subjective I find the 3D graphics are pleasant and easy on the eye. The game has some features over Advance Wars such as the lock on feature and assault to push a unit which are nice features. It's a pity there is no map editor/maker like in WarGroove however. I imagine the multiplayer could be pretty good and look forward to trying that aspect out.. Best game ever I really love this game

Best BGM

Best Story

Best Game

Best Fighting Game. I recommend this game if you enjoy experiencing something completely new and unfamiliar. There is just nothing else like it.

HyperRogue is essentially a simplistic turn-based roguelike with a mind-bending twist. It would take some math knowledge to explain it, but you won't need math to play and enjoy this game.

As far as the gameplay goes, there is an unbelievable amount of variety for how simple the base mechanics are. Lots of different lands with completely different rules and enemies, and more are constantly being added with updates. The fact that everything is happening on a hyperbolic plane adds a whole new dimension to navigating the game's world and outsmarting the mobs.. Absolutely worth 5/10.

With this DLC, there is actually some variety in the gameplay of different characters. While everyone in Team RWBY plays pretty much the same "Hack'n'Slash like you don't care"-style except for Weiss, we have a whole different role behaviour in Team JNPR.

Juane plays a supporter role, which is actually pretty weird for a Leader. His ult actually buffs your allies and yourself. Juane is also the only character in the game that has no gun whatsoever.

Nora's weapon swings slower than any other character, therefore she does damage that is out of this world. Be careful around this badass!

Pyrrha is exactly as OP as she should be. Her spear swings fast and strong, her ult does damage like \u2665\u2665\u2665\u2665 and she counters enemies without teleporting into the danger zone. Absolutely useful and still cute. Everyone should love her.

Rens attacks focus on range, given that he wields 2 pistols. He does a decent amount of close range damage, but his ranged attacks are far more useful as they damage bigger groups of enemies instead of just one enemy at a time. Also, his taunt is \u2665\u2665\u2665\u2665ing hilarious.

CONCLUSION:

Thank you very much for this amazing update Roosterteeth. Keep up the good work! Please play around more with the game, let us play more levels and characters, and this amazing arcade slasher will be even more of a total hit!
